

How to get your Gmail App Password

This guide shows how to create a Gmail App Password — the 16-character code Club Manager needs in order to send reminder emails on your behalf. The screenshots are from a Danish Google account, but the layout is identical in every language: look for the same icons in the same positions.

Step 1: Open your Google Account

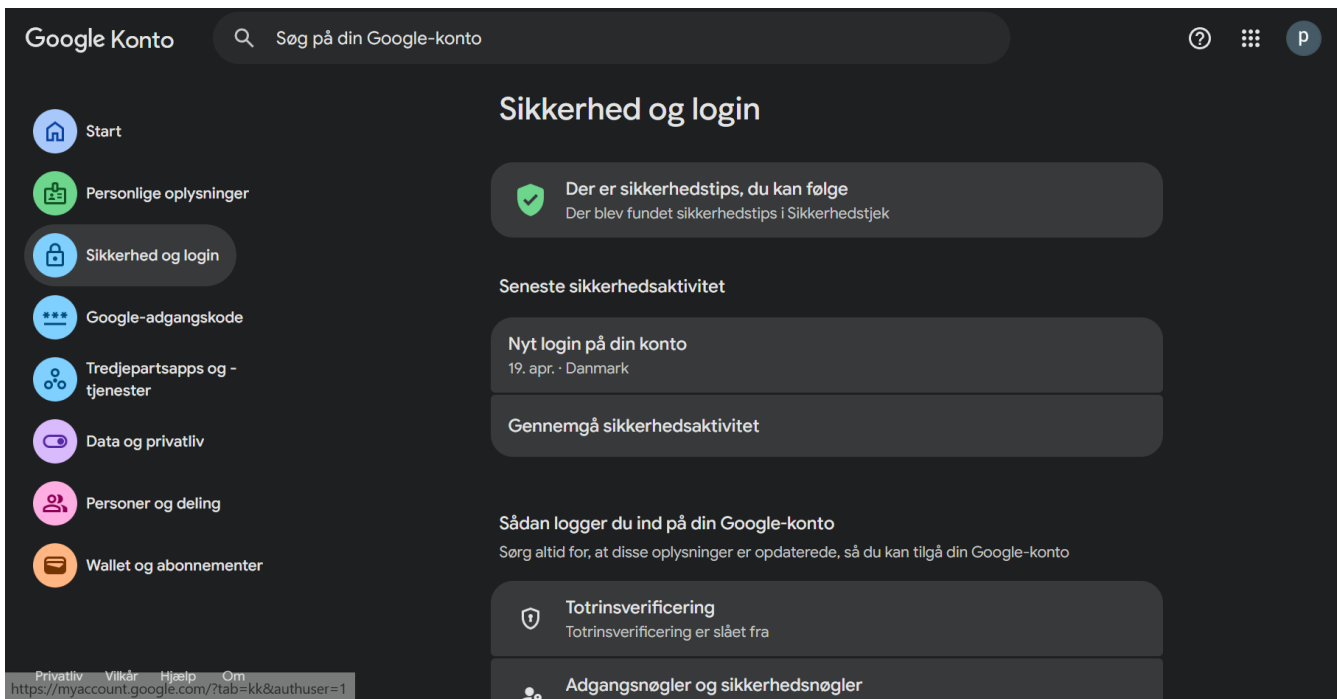

Go to **myaccount.google.com** in your web browser and sign in if asked. You will see the dashboard with your name in the middle and a list of options on the left.

Step 2: Open the Security page

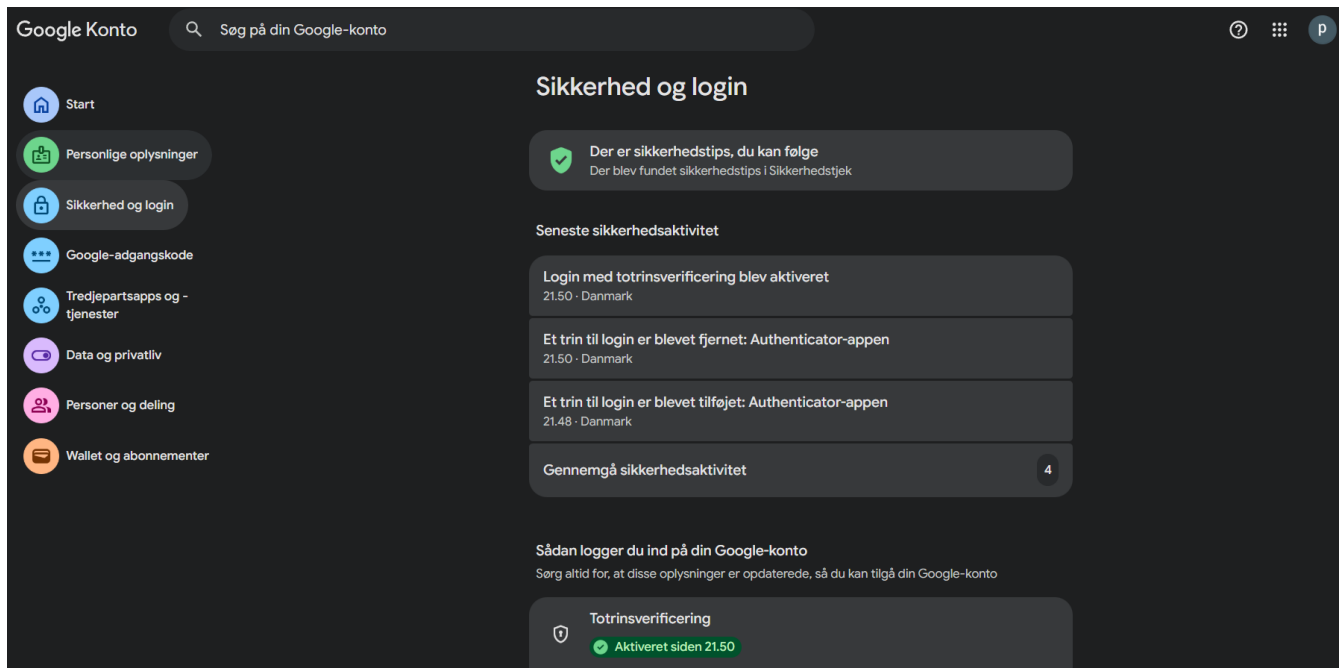

In the left sidebar, click **Security** (in this Danish example: *Sikkerhed og login*). Scroll down until you see the **2-Step Verification** row (*Totrinsverificering*).

If it shows **Off** (*slået fra*), click on it and follow Google's setup — you will need your phone to receive a code. When it shows a green check, return here.

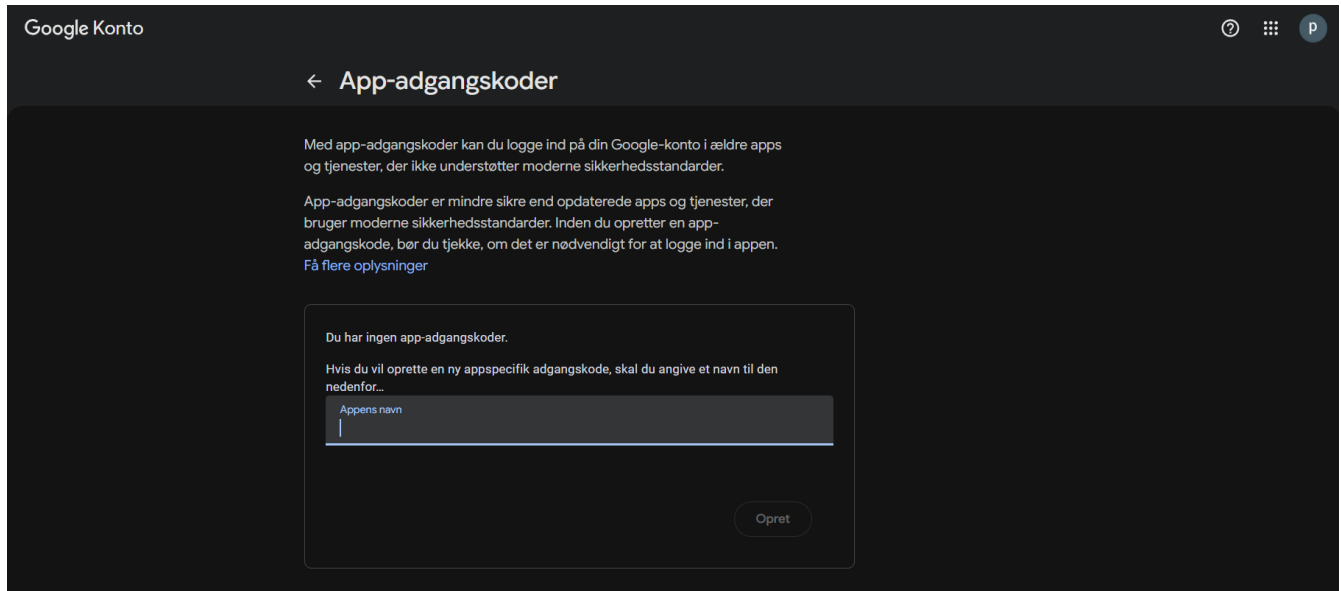

Step 3: Confirm 2-Step Verification is On

Once enabled, the row shows a green check and the words **On since...** (*Aktiveret siden...*). Only now can you continue to the App Password page.

Step 4: Open the App Passwords page

In your browser's address bar, type **myaccount.google.com/apppasswords** and press Enter. Google may ask for your account password again — that is normal. You will land on a page with one empty field labeled **App name** (*Appens navn*).

The screenshot shows the 'App-adgangskoder' (App passwords) page in a dark-themed browser window. The page title is 'App-adgangskoder' with a back arrow. The main content area has a light gray background and contains the following text:

Med app-adgangskoder kan du logge ind på din Google-konto i ældre apps og tjenester, der ikke understøtter moderne sikkerhedsstandarder.

App-adgangskoder er mindre sikre end opdaterede apps og tjenester, der bruger moderne sikkerhedsstandarder. Inden du opretter en app-adgangskode, bør du tjekke, om det er nødvendigt for at logge ind i appen. [Få flere oplysninger](#)

Below the text is a form box with the following elements:

- Text: 'Du har ingen app-adgangskoder.'
- Text: 'Hvis du vil oprette en ny appspecifik adgangskode, skal du angive et navn til den nedenfor...'
- Input field: Labeled 'Appens navn' (App name) with a text cursor.
- Button: 'Opret' (Create).

Step 5: Name the App Password

Type a name you will recognise — for example **Club Manager** — into the field, then click the blue **Create** button (*Opret*) in the bottom right.

Step 6: Copy the 16-character password

Google shows a popup with a password made of four groups of four letters. Select it with your mouse, copy it, then paste it into the **SMTP password** field in Club Manager's Email Settings.

Google only shows this password **once**. After you close the popup it cannot be viewed again. If you lose it, just create a new App Password the same way — it takes 30 seconds.
